Week 7: Systems Applications & Inequalities

Student: SA
Tutor: Rachel Eglash

October 23, 2025

Session 7.2
Systems of Inequalities

Quick Reference: Graphing Inequalities

Single Linear Inequality

Steps to Graph:

1. Write in slope-intercept form if possible: $y = mx + b$
2. Graph the boundary line:
   - Use **solid line** for $\leq$ or $\geq$ (boundary included)
   - Use **dashed line** for $<$ or $>$ (boundary not included)
3. Choose a test point (often $(0, 0)$ if not on the line)
4. Shade the region where the inequality is true

System of Linear Inequalities

Steps to Graph:

1. Graph each inequality on the same coordinate plane
2. The **solution region** is where ALL shaded areas overlap
3. The solution region is called the **feasible region**
4. Any point in this region satisfies all inequalities

Key Vocabulary:

- **Feasible region**: the solution set (overlapping shaded area)
- **Vertex**: corner point where boundary lines intersect
- **Bounded**: the feasible region is enclosed (finite area)
- **Unbounded**: the feasible region extends infinitely

Homework 7.2: Systems of Inequalities

Instructions

:

For each problem,

1. Graph each inequality carefully (solid vs. dashed lines)
2. Identify and shade the feasible region
3. Verify with a test point
4. Answer interpretation questions

Homework Problem 1: Basic Inequalities

Graph the inequality:

$y > \frac{3}{4}x - 1$

- Slope: _____
- y-intercept: _____
- Solid or dashed line? _____
- Shade above or below the line? _____

Graph the inequality:

$y \leq -2x + 1$

- Slope: _____
- y-intercept: _____
- Solid or dashed line? _____
- Shade above or below the line? _____

Homework Problem 2: Basic System

Graph the system of inequalities:

$y > 2x - 3$
$y \leq -x + 4$

Homework Problem 3: Bounded Inequalities

Graph the compound inequality:

$0 \leq x \leq 5$

Graph the compound inequality:

$0 \leq y \leq 4$

Graph the system of inequalities:

$0 \leq x \leq 5$
$0 \leq y \leq 4$

Understanding Check:

What shape will the feasible region be? _____

Is it bounded or unbounded? _____

Vertices of Feasible Region:

List all four corner points:

_____

Check:
Pick a test point in the feasible region and show that it satisfies both inequalities.

Pick a test point NOT in the feasible region
and show that it does NOT satisfy at least one of the inequalities.

Homework Problem 4: Application - Manufacturing

A factory makes tables and chairs.

Each table requires 4 hours of labor.
Each chair requires 2 hours of labor.

The factory has at most 20 hours of labor per day.

They must make at least 2 tables per day.
They can make at most 6 chairs per day.

Write and graph a system of inequalities.

Variables:
t = number of tables
c = number of chairs

System of Inequalities:

1. Labor constraint: _____

2. Minimum tables: _____

3. Maximum chairs: _____

4. Non-negative: $t \geq 0$ and $c \geq 0$ (already implied by context)

Interpretation Questions:

Can they make 3 tables and 4 chairs?

Why or why not?

Can they make 4 tables and 2 chairs?

Why or why not?

What is the maximum number of chairs if they make exactly 2 tables?
